The turbocharger increases the speed by forcing more air and fuel into the combustion chamber of the engine. This increases the HP and the torque output of the car. And the speed and acceleration to a certain extent. But it takes a toll on the engine, that is, if it is not capable enough to handle that pressure.

How does a turbocharger increase the speed of a car? - Quora

How-does-a-turbocharger-increase-the-speed-of-a-car

In horsepower terms, a bigger turbocharger has a greater capacity to increase the engine's horsepower as it can burn more fuel. The increase in HP from a bigger turbo can go over 30% above the engine's basic output.
