div&gt;&lt;div&gt;&lt;div&gt;The linear range can be measured simply by making a  
plot of analyte concentration versus fluorescence, using evenly-spaced analyte  
concentrations, and seeing at what concentration the data deviate from a straigh  
t line that is tangent to the low end of the concentration range.&lt;/div&gt;&lt;

mining the linear range is relatively easy, and can be achieved by &lt;span&gt;t
