If a number is evenly divisible by 2 with no remainder, then it is even. You can calculate the remainder with the modulo operator $\%$ like this $\text{num} \% 2 == 0$. If a number divided by 2 leaves a remainder of 1, then the number is odd. You can check for this using $\text{num} \% 2 == 1$.

14.3. Detecting Odd and Even

Zero is an even number. In other words, its parity — the quality of an integer being even or odd — is even. The simplest way to prove that zero is even is to check that it fits the definition of “even”: it is an integer multiple of 2, specifically $0 = 2 \times 0$.
